

DRAFT PACIFIC REGIONAL DECLARATION ON THE PREVENTION OF MARINE LITTER AND PLASTIC POLLUTION AND ITS IMPACTS

[PP0] *We*, representatives of the people of the Pacific region and stewards of the world's largest ocean, meeting at the **Environment Ministers' High-Level Talanoa**, 10th September 2021, are deeply concerned about the impacts of plastics and microplastics POLLUTION on our region and the [ineffectiveness of the current patchwork of international legal instruments in preventing] LACK OF INTERNATIONAL LEGAL INSTRUMENTS THAT ARE ABLE TO ADDRESS THE ENTIRE LIFE CYCLE OF PLASTIC AND PREVENT the acceleration of these impacts.

[PP1] *Recalling* the international commitments made by the Parties to multilateral environmental agreements including – but not limited to - the UN Framework Convention on Climate Change 1992, the Paris Agreement 2015, the Convention on Biodiversity 1992, the Basel Convention, International Human Rights instruments, the Sustainable Development Goals 2030, the SAMOA Pathway and the environmental principles notably the polluter-pays principle, precautionary principle and the inter-generational equity principle.

[PP2] Further recalling the commitments made by Pacific Islands Forum Leaders Ocean Statement 2021, the Parties to the Nouméa Convention 1986, and the Parties to the Waigani Convention 1995, and reaffirming the Kainaki II Declaration for Urgent Climate Change Action Now 2019, the Vermööre Declaration 2020 and the Ocean Day Declaration on Plastic Pollution 2021.

[PP3] *Reiterating* our commitment to work to protect our Ocean from harmful plastics through the implementation of our regional strategy Cleaner Pacific 2025, the Pacific Regional Action Plan on Marine Litter 2018-2025, and the Pacific Islands Framework for Nature Conservation and Protected Areas 2021 – 2025, notably its support for the development of a global framework to address marine litter.

[PP4] *Expressing* our grave concern about the environmental, social, cultural, economic, human health, food security and human rights impacts of plastics pollution at each stage of its life cycle on current and future generations.
Nz want something on impacts eg on birds and ecosystems

[PP5] *Calling* specific attention to the fact that notwithstanding our globally negligible contribution to plastic pollution, we PACIFIC ISLAND NATIONS are grossly and disproportionately affected by its impacts, particularly considering that we are not a major producer of plastics and their additives, and emphasizing the Second World Ocean Assessment stating that the highest recorded quantity of floating plastics are in the South Pacific subtropical gyre.

[PP6] *Underlining* that marine litter and plastic pollution is a transboundary global issue and that [we]PACIFIC ISLAND NATIONS are [THE NET] [often the] recipients of plastic pollution, the majority of which originates thousands of kilometres from our shores and is carried to our countries by atmospheric and oceanic currents.
NZ want to add “...help us protect our region and peoples...”.

[PP7] *Deeply concerned* about the accelerating rate of plastics production, underscoring the fact that 50% of all plastics produced are intended for the manufacture of single-use products, that the current 368 million metric tonnes of virgin plastics produced annually is set to double by 2040; that only 9% of all plastics ever produced have been recycled, and 12% have been incinerated; and that 79% of all plastics produced have accumulated in landfills or the environment.

[PP8] *Acknowledging* the actions taken to reduce and eliminate single use and problematic plastics in the region and the need for more ambitious action and global and regional policy frameworks such as extended producer responsibility, container deposit systems and consumer awareness and responsibility.

[PP9] *Convinced* that despite some progress at national and regional levels, the marine litter and plastic pollution crisis [ISLAND STATES] requires a dedicated and coordinated global and regional governance response with the support of all States and other institutional global and regional stakeholders.

[PP10] *Acknowledging* the role played by all stakeholders throughout the full plastics lifecycle, from extraction, production, trade, manufacturing, consumption to waste management and environmental legacy and the need for global intervention and support for pollution prevention at each stage.

[PP11] *Cognizant* of the vital global, regional and local ecosystem services provided by our Ocean and recalling SDG14, we are mindful of our role and responsibility as Ocean stewards to guard our Ocean from plastics pollution if we are to protect our peoples' cultural identity through protection of iconic species, fisheries and tourism industries, livelihoods, food security, and health.

[PP12] *Stressing* the importance of incorporating Indigenous Knowledge Systems, Practices, and Innovations as appropriate and with their free prior and informed consent that have evolved through generations into nature-based solutions for the sustainable conservation of ecosystems.

[PP13] *Recognizing* that plastics and climate change are inextricably linked particularly in their production and disposal, such as incineration, and reiterating that climate change is a top regional priority due to its disproportionately adverse impacts on human-environment relationships in the Pacific Islands.

Declare that we

[OP1] *Strongly support and urge* all United Nations Member States at the Fifth session of the United Nations Environment Assembly to support the establishment of an Intergovernmental Negotiating Committee to produce a new global agreement covering the whole life cycle of plastics.

[OP2] *Call* for the new global agreement on the prevention AND REDUCTION of new marine litter and plastic pollution, and management of plastic pollution already in our environment to complement and expand on existing international instruments to cover the full life cycle of plastics.

[OP3] *Call for* future discussions on this agreement to consider the need for financial and technical support mechanisms to adapt international science and best practice to the challenges specific to our region, as well as technology transfer and capacity building, and recall the United Nation's Environmental Assembly Resolution 2/11 calling on United Nations Member States to consider providing financial assistance in particular to Small Island Developing States to establish and implement necessary policies, regulatory frameworks and measures addressing plastic pollution.

[OP4] *Call for* future discussions on the agreement to include implementation measures such as National Plastic Pollution Prevention Plans and targets to be globally supported and coordinated as well as mechanisms for regular regional monitoring and reporting to support the Pacific islands region in meeting measurable marine litter and plastic pollution elimination targets.

[OP5] *Call for* future discussions on the agreement to consider the need for elements such as global restrictions on plastic production, the phasing out of toxic and avoidable plastics, problematic and single-use plastic products and additives and the harmonization of design and labelling standards, to support transition to a safe circular global economy and to find alternatives to allow for our continued economic development.

[OP6] *Call on* the international community to take urgent and immediate action to help us protect our region and peoples from further marine litter and plastic pollution impacts that threaten our marine ecosystems, our food security and our health.

[OP7] *Emphasize* the need for accessible information and support for scientific research on plastics and plastic pollution, data collection on waste plastics and material flows as well as the development of marine litter and plastic pollution prevention best practice to inform robust and coherent policy.

[OP8] *Support* ambitious policy implementation measures through mechanisms such as National Plastic Pollution Prevention Plans, [NATIONAL PLANS] noting the role that the private sector can play in helping drive solutions such as product stewardship, including extended producer responsibility and container deposit schemes.

[OP9] *Emphasize* that Indigenous Knowledge Systems, Practices, and Innovations with their free prior and informed consent must be an integral part of the solution to the plastics crisis.
