Kiribati is a group of low-lying islands located in the Micronesia region of the Pacific. It comprises of 20 inhabited islands (33 islands in total) covering a land area of 811 km². Its exclusive economic zone covers an oceanic area of 3.5 million km², one of the largest in the world, and spanning all four hemispheres. The capital and government centers are located in South Tarawa, home to almost half of its total population of 118,744.

South Tarawa is one of the most densely populated cities in the Pacific, with over 3,000 people/km² and records one of the highest growth rate (2.31% between the last two census’, 2010 and 2015). The high population density and on-going population growth of South Tarawa are exacerbating the already serious problems of waste disposal, sanitation, and environmental pollution.

The House of Assembly is the Legislature of Kiribati. Of the constitution modified this provision, created by the Constitution of 12 July 1979, in a Westminster system.

Kiribati is one of the most remote of the Pacific islands and has one of the largest and most productive fisheries. Fishing accounted for 26.1% of the Kiribati USD$200 million GDP in 2019. Kiribati GDP per capita for 2019 was $1,655, a 2.54% decline from 2018.

Kiribati is one of the most climate vulnerable countries in the world, with low lying atoll islands, a highly dispersed population, remoteness to major markets, lack of arable land, a narrow economic base, and the dual problems of sparse outer island communities and heavy overcrowding in the capital.

There is large variability in the management of waste in Kiribati. The main island of Tarawa has three landfills, and there are two dumpsites (unregulated) located on Kiritimati island. Household waste collection on Tarawa provided through municipal authorities, and a private Contractor oversees a pre-paid green bag collection. A Container Deposit recycling system exists on Tarawa, the ‘Kaoki Maange Recycling’ which has been in operation since 2004, collecting materials such as PET, aluminium and lead acid batteries. There are minimal collection services provided in the outer islands, as a result, waste is buried, burned, or disposed at sea.
Waste generated by health care facilities includes used needles and syringes, soiled dressings, body parts, diagnostic samples, blood, chemicals, pharmaceuticals, medical devices, and radioactive materials. Incorrect management of healthcare waste can expose health care workers, waste handlers, patients and local communities to infection and injuries, and risks polluting the environment. The volume of healthcare waste is increasing in the Pacific as populations grow and medical services expand.

**Healthcare Waste**

Activities implemented by PacWaste (2014-2018)

- **Baseline Survey**
  Cook Islands, Fiji, Federated States of Micronesia, Kiribati, Marshall Islands, Nauru, Niue, Papua New Guinea, Palau, Samoa, Solomon Islands, Timor Leste, Tonga, Tuvalu, Vanuatu

- **Incinerator Installation**
  Cook Islands, Fiji, Federated States of Micronesia, Kiribati, Nauru, Niue, Palau, Solomon Islands, Tonga, Tuvalu, Vanuatu

- **Training (Incinerator Operation)**
  Cook Islands, Fiji, Federated States of Micronesia, Kiribati, Nauru, Niue, Tonga, Tuvalu, Vanuatu

- **Training (Healthcare Waste Management)**
  Cook Islands, Fiji, Federated States of Micronesia, Kiribati, Marshall Islands, Nauru, Papua New Guinea, Palau, Samoa, Solomon Islands, Timor Leste, Tonga, Tuvalu, Vanuatu

- **Provision of Equipment**
  FSM, Nauru, Papua New Guinea, Timor Leste, Vanuatu

- **Policy and Regulation (Strategy)**
  Cook Islands, Fiji, Federated States of Micronesia, Kiribati, Nauru, Papua New Guinea, Palau, Samoa, Solomon Islands, Timor Leste, Tonga, Tuvalu

PacWastePlus is working directly with two member countries, and has regional activities underway, to assist with the management of healthcare waste through:

- **Incinerator Assessment**
  Cook Islands, Federated States of Micronesia, Fiji, Nauru, Niue, Solomon Islands, Tonga, Tuvalu, Vanuatu, Timor-Leste, Kiribati

- **Incinerator Repair**
  Kiribati, Palau, Solomon Islands, Tonga, Tuvalu, Vanuatu

- **Training**
  Timor-Leste, Papua New Guinea, Regional

- **Policy and Regulation**
  Timor-Leste, Papua New Guinea

- **Public Awareness**
  Regional

- **Remediation**
  Timor-Leste

- **Provision of Equipment**
  Timor-Leste

**Asbestos**

Asbestos refers to six naturally occurring silicate minerals composing of long and thin fibrous crystals. Historically, asbestos was a common building material, but is now banned from most modern products as it is a known carcinogen. Numerous buildings in the Pacific contain asbestos, and risk of exposure is elevated due to the number of extreme weather events, which can damage asbestos containing materials (ACM) and release airborne fibres.

Activities implemented by PacWaste (2014-2018)

- **Baseline survey**
  Cook Islands, Fiji, Federated States of Micronesia, Kiribati, RMI, Nauru, Niue, Palau, Samoa, Solomon Islands, Tonga, Tuvalu, Vanuatu

- **Abatement**
  Abated = 27,873m²
  Cook Islands, Fiji, Federated States of Micronesia, Kiribati, RM, Nauru, Samoa, Solomon Islands, Tonga, Vanuatu

- **Training**
  Fiji, Federated States of Micronesia, Kiribati, Nauru, Niue, Solomon Islands, Tonga, Vanuatu

- **Public Awareness**
  Cook Islands, Fiji, Kiribati, RMI, Nauru, Niue, Palau, Solomon Islands, Tonga, Tuvalu, Vanuatu

- **Policy and Regulation (Asbestos Ban, Code of Practice)**
  Nauru, Niue, Kiribati, Tonga, Tuvalu, Regional

PacWastePlus is working directly with five member countries, and has regional activities underway, to assist with the management of asbestos through:

- **Survey/Investigation**
  Nauru, Kiribati, Tonga, Tuvalu

- **Abatement**
  Nauru, Niue, Kiribati, Tonga

- **Training**
  Nauru, Niue, Kiribati, Tonga, Tuvalu

- **Policy and Regulation (Asbestos Ban, Code of Practice)**
  Nauru, Niue, Kiribati, Tonga, Tuvalu, Regional

- **Public Awareness**
  Regional

The PacWastePlus programme brings together key organisations supporting waste and pollution sector in the region. Additionally, the programme is partnering with numerous other development partners operating waste management projects in the region, to ensure no duplication of efforts or wasted resources.
The rapidly increasing use of electrical and electronic equipment globally is resulting in an increase in the volume of e-waste generated. E-waste contains a range of hazardous materials including heavy metals, brominated flame retardants and other toxic substances. Incorrectly managed e-waste has a risk to release toxic substances and has potential to contaminate the environment. E-waste management is an emerging issue in the Pacific due to the lack of recycling and disposal options available. Even though electrical and electronic items contain recoverable and valuable components, efforts to effectively manage e-waste are often faced with economical, logistical, and technical challenges.

Activities implemented by PacWaste (2014-2018)

Facility Design/Establishment (Pilot and processing)
Cook Islands, Kiribati, Palau, Tonga, Vanuatu

Public Awareness
Cook Islands, Kiribati, RMI, Tonga

Policy and Regulation (Strategy)
Tuvalu

Collection System
RMI, Solomon Islands

PacWastePlus is currently working directly with two member countries, and has regional activities underway, to assist with the management of e-waste through the:

Facility Design/Establishment
Samoa

Training
Samoa, Niue, Regional

Policy and Regulation (ARF, Levy, Strategy)
Papua New Guinea, Samoa, Marshall Islands, Cook Islands, Nauru, Solomon Islands, Vanuatu, Kiribati, Regional

Collection System
Samoa

Public Awareness
Regional

Bulky waste is materials that are too large to be accepted by regular waste collection services (end-of-life vehicles, tyres, white goods, furniture, construction waste, and other large household goods). In the Pacific region, bulky waste is problematic to manage as it requires specialist equipment and a large area for effective collection and processing, and requires potentially cost-prohibitive transport to reach recycle markets. As a result, bulky waste items can often be seen disposed in landfills, dumps and discarded on vacant land.

PacWastePlus seeks to work directly with two countries, and has regional activities underway, to assist with the management of bulky waste through the:

Survey/Investigation
Palau, Regional

Provision of Equipment
Marshall Islands*

Training
Marshall Islands*, Palau, Regional

Policy and Regulation (ARF, Levy)
Samoa, Marshall Islands, Cook Islands, Nauru, Solomon Islands, Vanuatu, Kiribati, Regional

Public Awareness
Regional

*Project to be determined

The four key result areas of PacWastePlus are:

- improved data collection, information sharing, and education and awareness,
- policies and regulatory frameworks developed and implemented
- best practices including enhanced private sector engagement and infrastructure development implemented
- enhanced human capacity
Pacific Island countries largely depend on the ocean and water bodies for daily sustenance and economic livelihood. Improper waste management can impact water bodies and poses a potential threat to the health of local communities.

PacWastePlus has partnered with The Pacific Community (SPC) to develop and pilot a wastewater pilot project.

Activity implemented by PacWaste (2014-2018)

- **Pilot Project on Integrated atoll waste management**
  - Marshall Islands (Majuro)

- **Recyclers Network**
  - Cook Islands, Fiji, Federated States of Micronesia, Kiribati, Marshall Islands, Nauru, Niue, Papua New Guinea, Palau, Samoa, Solomon Islands, Timor Leste, Tonga, Tuvalu, Vanuatu

PacWastePlus has regional activities underway and will seek to work directly with countries to assist with the management of organic material through the:

- **Survey/Investigation**
  - Nauru*, Solomon Islands, Vanuatu

- **Facility Design/Establishment**
  - Nauru, Solomon Islands, Vanuatu

- **Training**
  - Nauru*, Solomon Islands, Vanuatu, Regional

- **Policy and Regulation (Operating Procedure)**
  - Nauru, Solomon Islands, Vanuatu, Regional

- **Public Awareness**
  - Regional

PacWastePlus is providing direct assistance to six member countries, and has regional activities underway, to assist with the management of recyclables through the:

- **Facility Design/Establishment**
  - Federated States of Micronesia, Solomon Islands, Cook Islands, Tuvalu

- **Provision of Equipment**
  - Marshall Islands, Vanuatu*, Niue*

- **Seed Funding**
  - Cook Islands, Marshall Islands, Niue*, Vanuatu*

- **Training**
  - Federated States of Micronesia, Solomon Islands, Cook Islands, Tuvalu, Marshall Islands, Vanuatu

- **Policy and Regulation (ARF, Levy)**
  - Samoa, Cook Islands, Nauru, Solomon Islands, Marshall Islands, Vanuatu, Regional

- **Public Awareness**
  - Regional

*Project to be determined

Organic waste

Organic material is biodegradable matter such as kitchen scraps (food), garden cuttings, grass and branches; and paper. Up to 50% of waste disposed to landfill in the Pacific is organic material. When processed correctly (in an “aerobic” or oxygen-filled environment), organic materials can produce valuable nutrient rich products, such as compost, suitable for soil enhancement and food cultivation. However, when intermingled with other waste and disposed in a landfill or dump (an “anaerobic” environment), organic material can release toxic leachate and generate methane gas.

Recyclables

Recycling is a process to convert “waste” items into new products. Globally, consumption patterns generally following a linear “buy, use and throw” model. This linear model is problematic in the Pacific as all recyclable items are imported into the region and the majority of recyclable waste is disposed into overfilling landfills, with associated cost borne by national and local governments. Managing recyclables in the Pacific region is challenging due to the relatively small volume of items received being unable to provide an economy of scale – resulting in challenges for the collection, processing and reverse shipping to reach recycle markets. As a result, discarded recyclable items are a prevalent sight in the Pacific.

**Water impacted by Solid Waste**

Pacific Island countries largely depend on the ocean and water bodies for daily sustenance and economic livelihood. Improper waste management can impact water bodies and poses a potential threat to the health of local communities.

PacWastePlus activities were selected either:

1) directly by countries as part of their chosen country projects; or
2) to respond to a key topic or action area brought to the attention of the PacWastePlus Programme Management Unit

Wherever possible country specific projects will be converted into regional resources, so all countries and territories in the region can benefit from the investment.
PACWASTEPLUS REGIONAL KEY RESULT AREAS

In addition to activities directly related to the waste streams, PacWastePlus will undertake regional activities under each key result area. These activities are designed to respond to needs identified by member countries and to inform and support implementation of country specific activities.

Data Gathering

- Waste Audits to inform decision making
- Research into Gender and Social Inclusion issues in waste management throughout the region
- Development of a decision support tool to assist management option assessments
- Research into possible Small Scale Technology options suitable for use in the region
- Research into the management options for used tyres
- Research into alternatives to the use of disposable diapers
- Research into the impacts of different types of landfill designs
- Research to understand social and technical barriers and opportunities for managing organics
- Research into the management options for bulky waste (ELV/Construction waste)

Policy and Regulation

- Review and assessment of national legislative frameworks as they relate to waste management
- Specific Legislative assistance to each country to strengthen waste management legislative instruments*

*Currently utilised for ARF = Samoa, Marshall Islands, Cook Islands

Education and Awareness

- Development and implementation of a Regional Education and Awareness Plan
- Assistance to develop National Education and Awareness Plans that will support the implementation of PacWastePlus in each participating country
- Implementation of three pilot Behavioural Change/Social Marketing Campaigns

Capacity Building

- Identify skills countries feel their staff and waste management workers should have and provide the up-skilling
- Developing a sustainable capacity building program for waste management in the Pacific
